

Kayden Industries provides fully integrated dewatering skids with a single or dual centrifuge setup complete with pumps and polymer injection units. Kayden units are designed and built to be transported easily and efficiently while operating reliably in the harshest environments around the world. Dewatering is an economical approach to any operation by reducing the reliance on fresh water, minimizing disposal costs and costly chemical consumption.

FEATURES AND BENEFITS

- Efficient load package for transportation.
- Reduced rig up and rig down time, with minimal manpower requirements.
- Hydraulic lift cylinders are incorporated into the skid; no crane assistance required.
- Compliant with all safety standards.

TECHNICAL SPECIFICATIONS

	SINGLE CENTRIFUGE	DUAL CENTRIFUGE
Width	10'6"	10'4"
Length	34'	42'1"
Height Collapsed	10'11"	11'1"
Height Extended	15'7"	13'3"
Weight	32,393 lb (14,693 kg)	45,563 lb (20,667 kg)
